

Installing the Zipper Door

The Nomadics Zipper Door is part of our Campground Model and will only work in combination with your Nomadics Tipi Campground Cover. The tipi cover has velcro on both sides of the door on the outside as well as velcro on the inside. To install the Zipper Door, your tipi cover must be set up, but NOT fully staked down. The door pole and the #1 pole need to be in their proper positions, right next to the door hole opening, with only the front staking loops staked down.

Take the closed Zipper Door and move the upper part inwards. This is best done with two people (1). Start attaching the velcro 'hooks' of the upper left door side to the velcro 'loops' on the left side of the cover (2). Attach it all the way down to the bottom and repeat on the right side (3). If you are installing the Zipper Door by yourself, open the zipper and step inside to attach the upper, inner part (4). The inner part of the Zipper Door attaches to velcro that is sewn onto the inside of the door hole.

Next, use a zip tie to make a loop around the inside of the second pin above the door. Tie the ribbon of the Zipper Door to this loop, in order to give it a snug fit (5).

Your zipper door has loops and a D-ring on both sides as well as the bottom. These D-rings can be used to 'lock' your door in place (6).
